Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from *A Tract on Crystallography: Designed for the Use of Students in the University* The following Tract contains an investigation of the general geometrical properties of the systems of planes by which crystals are bounded, and of the formulae for calculating their dihedral angles, indices and elements, given without demonstration in the last edition of Phillips Mineralogy, or of equivalent expressions in a more convenient shape. To these have been added some theorems which appeared in the Philosophical Magazine for 1857, 1858, and 1859. The last two chapters contain concise investigations of the general properties of crystalline forms by the methods of ordinary and of analytical Geometry, These were suggested by a remarkable paper entitled *Sulla legge di connessione delle forme cristalline di una stessa sostanza*, by the Commendatore Quintino Sella (*Nuovo Cimento*, Vol. iv.). The Tract, therefore, besides containing all the theorems of Mathematical Crystallography usually required in calculating the angles of crystals, their elements, and the symbols of their faces, will form, it is hoped, a useful supplement to the Mineralogy, and also to the Crystallography published by the author in 1839.
